Profile

Final-year Software Engineering student who builds, deploys and self-hosts web applications on Linux. Experienced in supporting non-technical users through IT support work, and comfortable working with people from different backgrounds after living in six countries growing up. Seeking a graduate software engineering role.

Education

BSc (Hons) Software Engineering with Foundation Year, University of Greater Manchester (taught at Bradford College). Expected 2027.

- Level 4 average: 72.5%. Level 5 average: 67.8%.
- Highest marks: Cloud Concepts (80%), Software Engineering Principles and Practice (77%), Data Structures and Algorithms (75%).
- Also studied: Web Application Development, Mobile Application Development, Database Management, Data Analytics.
- Final year: Advanced Programming, Information System Security, Final Year Project.

University of Huddersfield, Studied International Business (one year), then transferred to Software Engineering.

Projects

Final Year Project: Accessibility software suite for individuals with colour blindness (in progress)

- Designed software to isolate and correct problematic areas of images for a given type of colour blindness.
- Delivering as a Chrome extension for the web and mobile app with device camera, built on shared colour-detection component.
- Working in agile iterations with a privacy-first design (on-device processing, data minimisation under UK GDPR)

Personal website: zakarya.me · Vue, Vite, Nginx, Oracle Cloud · GitHub

- Built a single-page application in Vue and deployed it on an Oracle Cloud VPS, served by Nginx.
- Secured the site with Let's Encrypt certificates and placed it behind Cloudflare.
- Wrote a Git post-receive hook so every push to the server builds and deploys the site automatically.

Windows desktop application: BeTransparent · C#, Photino.NET, Windows API · GitHub

- Created a utility application that allows users to set transparency of any windows application.
- Built the interface as a web UI with Photino.NET.

- Uses native Windows API directly from C# with no additional dependencies or library used.
- Published as open source with a README, screenshot and usage notes.

Technical skills

- **Languages (project work):** C#, JavaScript, HTML/CSS
- **Languages (university coursework):** Python, Java, C
- **Frameworks and libraries:** Vue, Vite, Photino.NET
- **Infrastructure and tools:** Linux, Nginx (web server and reverse proxy), Let's Encrypt, Cloudflare, Oracle Cloud, Git (including server-side hooks for automated deployment), self-hosting web applications

Experience

IT Volunteer, Bradford College IT Department · 2023

- Provide hands-on IT support to staff and students, diagnosing and resolving hardware and software faults.
- Explain technical fixes clearly to non-technical users while working in a live institutional environment.

Administrative Assistant, GP Surgery · 2021 to 2022

- Managed scheduling, correspondence and patient enquiries on behalf of the GP.
- Provided technical support for the surgery's website, applying early web development knowledge in a professional setting.
- Drafted documents and presentations, developing attention to detail and written communication skills.

Martial Arts Coaching Assistant Brazilian Jiu-Jitsu Club · 2018 to 2020

- Assisted in coaching classes, giving clear instruction and feedback to students of varying skill levels.
- Broke complex techniques into simple steps, building leadership and patience.

Interests

Self-hosting and Linux, Java mod development for Minecraft, Brazilian jiu-jitsu.
